

PHLEBOTOMY STUDENT HANDBOOK

KAP'IOLANI COMMUNITY COLLEGE PHLEBOTOMY PROGRAM

The mission of the Phlebotomy program is to deliver and maintain a student-centered clinical laboratory education program that employs industry standards through partnerships with the healthcare community.

The Goals of the Phlebotomy Program are to:

- > Prepare graduates for clinical laboratory phlebotomy/laboratory assistant positions;
- > Provide qualified phlebotomists/lab assistants to meet the labor needs of the state of Hawai'i;
- Maintain an up-to-date curriculum that serves the needs of the students and the community;
- > Serve as an educational resource for the laboratory community; and
- ➤ Offer continuing education for career mobility for laboratory personnel and to be part of the career ladder for upward mobility in the clinical laboratory profession

-	2	-

WELCOME

The faculty and staff of the University of *Hawai'i's Kapi'olani* Community College Phlebotomy Program are pleased to welcome you and you a challenging, productive, and successful professional training experience

We realize that you have many questions regarding the program, and it is the intent of the Phlebotomy Program Student handbook to answer most of these questions. If, after reading it, you still have any unanswered questions, please feel free to contact the Phlebotomy Program Director. Also, we would appreciate any suggestions regarding information that is not presently included in the Phlebotomy Student handbook that you feel would be helpful to future students.

This handbook will provide you with detailed information regarding what will be expected of you as a student and as a professional. It includes policies and procedures that you will be responsible for following. It is expected that you will read and become familiar with this student handbook and review as you master different skills required to become a professional phlebotomist.

Once again, we warmly welcome you and wish you much success in your endeavor to become a professional member of the healthcare team.

Prof. Shepherd Maingano Ph.D., GCCR., MLS (ASCP) Director: MLT and Phlebotomy Programs

This program is approved by the National Accrediting Agency for Clinical Laboratory Sciences.

National Accrediting Agency for Clinical Laboratory Sciences (NAACLS)

5600 N. River Rd.

Suite 720

Des Plaines, IL 60018-5119

STUDENT LEARNER OUTCOMES

Upon successful completion of the KCC Phlebotomy Program, the student will be able to:

- ➤ Demonstrate knowledge of the health care delivery system and use pertinent medical terminology.
- ➤ Demonstrate knowledge of infection control and safety.
- Relate major areas of the clinical laboratory to general pathologic conditions associated with the body systems.
- ➤ Demonstrate understanding of the importance of specimen collection in the overall patient care system.
- Demonstrate knowledge of blood collection equipment, various types of additives used, special precautions necessary, and substances that can interfere in clinical analysis of blood constituents.
- Demonstrate proper techniques to perform venipuncture and microcapillary/dermal puncture, performing a stated minimum number of successful unaided venipunctures and finger sticks, while using appropriate equipment for each sample.
- ➤ Demonstrate understanding of requisitioning, specimen transport, and specimen processing.
- ➤ Demonstrate understanding of quality assurance in phlebotomy.
- ➤ Demonstrate understanding of the basic concepts of communication, personal and patient interaction, stress management, professional behavior, and legal implications of the work environment.
- Exhibit a professional demeanor while performing phlebotomist duties.
- > Provide standard first aid and/or CPR when needed.
- Participate in continuing education to maintain and update professional competence.
- ➤ Pass a certification examination administered by the American Society for Clinical Pathology (ASCP).

ESSENTIAL FUNCTIONS

In order to be a successful graduate of the Phlebotomy Program, the student must:

- ➤ Demonstrate mobility sufficient to move within the assigned laboratory/clinical area to access patients who are seated or in a supine position.
- > Demonstrate motor skills sufficient to manipulate blood drawing equipment and to palpate veins.
- ➤ Demonstrate corrected auditory ability sufficient to understand verbal communications from instructors, patients, and members of the health team as well as to respond to emergency signals.
- ➤ Demonstrate corrected visual ability sufficient to determine sites for phlebotomy and to accurately perform waived laboratory tests.
- ➤ Be able to understand English suffic5 iently to comprehend and follow verbal instructions in the laboratory/clinical area.

COURSE COMPETENCIES

Subject	Objective	e	Evaluation
1. Introduction	At the co	onclusion of this lecture series,	An average score of at least
	the stude	nt will be able to:	70% will be attained on all
	1.1.	Define the term phlebotomy.	written laboratory reports
	1.2.	List the duties of the	and/or examinations
		phlebotomist, lab assistant,	covering this material.
		MLT/CLT, MT/CLS and	
		Pathologist.	
		(NAACLS Competencies 1.1, 1.4)	
	1.3.	Describe the optimal	
		characteristics of a laboratory	
		professional.	
	1 1	(NAACLS Competency 1.4)	
	1.4.	Define and distinguish	
		between certification,	
	1.5	licensure, and accreditation.	
	1.5.	Identify the national clinical	
2. Medical Terminology	At the co	laboratory organizations.	An average score of at least
(NAACLS Competency 1.0)		nt will be able to:	70% will be attained on all
C	2.1.	Describe the rationale for	written laboratory reports
	2.1.		and/or examinations
		health care professionals using medical terminology.	covering this material.
		(NAACLS Competency 1.7)	covering this material.
	2.2.	Explain how medical terms	
		can be translated.	
	2.3.	Define the terms: root,	
		prefix, and suffix.	
	2.4.	Describe the use of	
		abbreviations and acronyms	
		in health care.	
3. Health Care Delivery	At the co	onclusion of this lecture series,	An average score of at least
System	the stude	nt will be able to:	70% will be attained on all
(NAACLS Competency 1.1)	3.1.	Identify the key areas in a	written laboratory reports
		hospital organizational	and/or examinations
		structure.	covering this material.
		(NAACLS Competency 1.7)	
	3.2.	Describe the various health	
		professionals on the health	
	2.2	care team.	
	3.3.	List the departments of the	
		anatomical laboratory and	
		the clinical laboratory.	
		(NAACLS Competency 1.3)	
	1		1

	3.4.	Describe the general nature	
		of the testing done by each	
		department of the laboratory.	
		(NAACLS Competency 1.5)	
	3.5.	Identify the different levels of	
		personnel working in the	
		clinical laboratory.	
	2.6	(NAACLS Competency 1.4)	
	3.6.	Explain the education	
		requirements for each level	
		of personnel working in the	
		clinical laboratories.	
	3.7.	(NAACLS Competency 1.4) Describe the regulations of	
	3.7.	clinical laboratories.	
	3.8.	Define and describe JCAHO,	
	3.6.	CAP, and NCCLS	
	3.9.	Describe the Clinical	
	3.9.	Laboratory Improvement Act	
		(CLIA) of 1988.	
	3.10.	Describe recent changes in	
	3.10.	the health care system such	
		as HMOs, PPOs, DRGs, and	
		managed care.	
4. Infection Control and	At the co	onclusion of this lecture series,	An average score of at least
Safety		ent will be able to:	70% will be attained on all
Surety	4.1.	List the categories of the	written laboratory reports
		laboratory safety hazards.	and/or examinations
		Define the term: nosocomial	covering this material.
		infection.	
	4.2.	Explain the importance of	
		hand washing in infection	
		control.	
		(NAACLS Competency 2.2.4)	
	4.3.	List the steps in correct hand	
		washing.	
		(NAACLS Competency 2.2.3)	
	4.4.	Describe the items including	
		the protective apparel	
		required for each one.	
	4.5.	(NAACLS Competency 2.2.3) Describe the items included	
		TACSCLUCE LUC HELDS HICHIGE(I

5. Specimen Collection		nclusion of this lecture series,	
and Integrity		nt will be able to:	
	5.1.	Instruct the patient in the	
		proper collection and	
		preservation for non-blood	
		specimens.	
		(NAACLS Competency 7.2)	
	5.2.	Explain methods for	
		transporting and processing	
		specimens for routine and	
		special testing and reference	
		laboratory testing.	
		(NAACLS Competencies 7.3 and 7.4)	
	5.3.	Identify and report potential	
		pre-analytical errors that may	
		occur during specimen	
		collection, labelling,	
		transporting, and processing.	
		(NAAČLS Competency 7.5)	
6. Introduction to the		nclusion of this lecture series,	An average score of at least
Body and the		nt will be able to:	70% will be attained on all
Integumentary System	6.1.	Relate positions, directions,	written laboratory reports
(NAACLS Competencies 3.00 and		and planes of the body to	and/or examinations
3.1)		phlebotomy.	covering this material.
		(NAACLS Competency 3.00)	
	6.2.	List the major body systems.	
	6.3.	Identify the major structures	
		of the integumentary system,	
		including the function,	
		disorders of and diagnostic	
		tests.	
7. Circulatory and		nclusion of this lecture series,	An average score of at least
Lymphatic Systems		nt will be able to:	70% will be attained on all
(NAACLS Competencies 3.00 and	7.1.	Describe the primary	written laboratory reports
3.1)		functions the blood vessels,	and/or examinations
		heart, and blood.	covering this material.
	7.2.	Differentiate between	
		arteries, veins, and capillaries	
		by structure, function, and	
		composition.	
		(NAACLS Competency 3.6))	
	7.3.	Locate the basilic, cephalic,	
		and median cubital veins.	
		(NAACLS Competency 3.2)	
	7.4.	Identify the components of	
		blood.	
	7.5.	State the major function of	
		each of the formed elements.	

	7.6.	Briefly explain the role of the	
	7.0.	immune system.	
	7.7.	Differentiate between whole	
		blood, serum and plasma.	
		(NAACLS Competency 3.3)	
	7.8.	Briefly explain the role of the	
		immune system.	
		(NAACLS Competency 3.1)	
		Identify the major structures	
		of the circulatory and	
		lymphatic systems, including	
		the function, disorders of,	
		and diagnostic test. (NAACLS Competency 3.1)	
8. Dermal Puncture		nclusion of this lecture series,	An average score of at least
(NAACLS Competencies 5.5 and 5.6)		nt will be able to:	70% will be attained on all
unu 3.0)	8.1.	List the reasons for	written laboratory reports
		performing dermal puncture	and/or examinations
		rather than venipuncture. (NAACLS Competency 6.1)	covering this material.
	8.2.	Describe the composition of	
		capillary blood.	
		(NAACLS Competency 3.6)	
	8.3.	Describe the various types of	
		dermal puncture equipment	
		available along with the pros	
		and cons of each.	
	0.4	(NAACLS Competency 6.4)	
	8.4.	Describe proper patient	
		identification and preparation	
		for dermal puncture. (NAACLS Competency 4.1)	
	8.5.	List the appropriate and	
		inappropriate sites for dermal	
		puncture.	
		(NAACLS Competencies 6.1 and 6.7)	
	8.6.	Describe the proper	
		cleansing process for	
		puncture.	
	0.7	(NAACLS Competency 6.1)	
	8.7.	List the steps involved in	
		performing the dermal puncture.	
	8.8.	Describe the process of	
	0.0.	specimen collection after a	
		dermal puncture, including	
		the correct order of draw.	
	8.9.	(NAACLS Competencies 5.6 and 5.7) Define hematocrit.	

	8.10.	Explain the procedure for correctly filling and sealing a	
	8.11.	hematocrit tube. Describe the proper way to	
	0.12	load and run a hematocrit centrifuge.	
	8.12.	Explain the procedure for reading a spun hematocrit.	
	8.13.	List the normal values for	
	8.14.	male and female hematocrits. Explain why male and	
	0.14.	female normal values differ.	
	Given w	ritten instructions and verbal	The hematocrit value will
	explanati	ions, the student will able to:	fall within 10% of value
	8.15.	Perform a	established by course
		competent/effective dermal	instructor.
		puncture according to written	
		procedural and safety	
		guidelines.	
	8.16.	(NAACLS Competency 6.12) Perform hematocrit testing	
	0.10.	on capillary samples.	
9. Venipuncture	At the co	onclusion of this lecture series,	An average score of at least
(NAACLS Competency 5.00)		ent will be able to:	70% will be attained on all
	9.1.	Describe needles used for	written laboratory reports
		phlebotomy including the	and/or examinations
		terms: bevel, shaft, hub,	covering this material.
		stopper puncturing end,	
		sheath, gauge, and length.	
		(NAACLS Competency 5.5)	
	9.2.	Describe the correct	
		procedure for needle disposal	
		when a sharps keeper is and	
		is not available.	
	9.3.	List the various vacuum	
	7.5.	tubes available along with	
		their additives and functions.	
		(NAACLS Competencies 5.1 and 5.2)	
	9.4.	Define anticoagulant.	
	9.5.	Explain how various	
		anticoagulants work.	
	9.6.	Demonstrate the correct	
		order of draw using vacuum	
		tubes and the rationale for it.	

9.7. Explain the correct order of draw using vacuum tubes and the rationale for it. (NAACLS Competency 5.3) 9.8. Explain the purpose for using a tourniquet. (NAACLS Competency 5.5) 9.9. Describe the options for protecting the puncture site. Explain the purpose of a 9.10. requisition. (NAACLS Competency 7.00) 9.11. List the required information on a requisition. (NAACLS Competency 3.3) 9.12. Demonstrate the way to greet a patient for phlebotomy. 9.13. Describe the legal and ethical importance of proper identification of patient for phlebotomy and the sample. (NAACLS Competency 4.1) 9.14. Describe the way to position and prepare a patient for phlebotomy. Demonstrate the way to tie a 9.15. tourniquet. 9.16. Define hemoconcentration and list its causes. (NAACLS Competency 6.4) Define antecubital fossa. 9.17. 9.18. Demonstrate the steps in choosing and identifying a vein for phlebotomy. 9.19. Demonstrate the cleansing procedure for phlebotomy. (NAACLS Competency 6.2) 9.20. Describe each step in the venipuncture process to include proper direction, angle, depth, and aspiration. (NAACLS Competencies 6.5 & 6.10) 9.21. Explain the labeling process of vacuum tubes, including the information required on the labels.

	6.4.	T1 .10 1	
	9.22.	Identify alternate	
		venipuncture sites and	
		describe the limitations and	
		precautions for each site.	
	Given w	ritten instructions and verbal	An average score of at least
		ions, the student will be able	70% will be attained on all

	15.8 Explain why the Allen test is
	done.
	15.9 Describe the steps in
	preparing the puncture site
	for an arterial blood gas collection.
	15.10 Describe how arterial blood
	gas samples are transported
	to the laboratory for testing.
	Given written instructions and verbal explanations, the student will be able assess collateral circulation.
	to: 15.11 Perform an Allen test on a
16. Pediatrics	classmate.
10. Tediatrics	At the conclusion of this lecture series, the student will be able to: An average score of at least 70% will be attained on all
	16.1 Name the maximum depth a written laboratory reports heel stick device may and/or examinations
	,
	puncture. covering this material. 16.2 List the commonly used
	sample containers for
	capillary puncture on
	children.
	16.3 Describe the need for and use
	of a heel warmer.
	16.4 Describe the options to be
	considered when deciding if
	parents should assist in blood
	collection from their child.
	16.5 Describe the acceptable
	puncture area on an infant's
	foot for capillary puncture.
	16.6 Explain the policy against
	using bandages on children
	less than two years old.
	16.7 Explain why bilirubin levels
	are commonly order on
	infants.
	16.8 Describe the special handling
	required for bilirubin samples.
	16.9 Explain the metabolic
	disorder phenylketonuria.
	16.10 Describe the process of
	collecting samples from
	infants for phenylketonuria
	testing.

KAPI OLANI COMMUNITY COLLEGE PHLEBOTOMY PROGRAM

POLICIES

CERTIFICATE OF COMPETENCE

Students who complete the 110 hours on campus with 15 successful venipunctures, two competent dermal punctures, and an average of 70% on the quizzes, computer assignments, midterm, and final exam are eligible to begin the internship. After at least 100 hours of phlebotomy with a minimum of 100 successful venipunctures and a score of at least 70% on the clinical evaluation, the student will receive the Certificate of Competence from Kapi olani Community College.

Registered apprentices will receive the Certificate of Competence from Kapi olani Community College after the first 100 hours of employment following the completion of the classroom course with documentation of a minimum of 100 successful venipunctures.

The granting of the certificate is not contingent upon passing an external certification examination.

NATIONAL CERTIFICATION

Students who have completed the above requirements are eligible to take the national certification examination for Phlebotomy Technician (PBT) administered by the American Society for Clinical Pathology (ASCP) Board of Certification (BOC).

ATTENDANCE

Attendance is encouraged for every class. There will be no make-up exams or laboratories for non-attendance of classes. Absences due to extraordinary circumstances will be evaluated on an individual basis provided that the student informs the faculty as soon as circumstances allow. Students are expected to be punctual for all classes, as late arrivals disrupt the entire class. The instructor will not repeat information for individuals who arrive late for class.

LABORATORY RULES

- 1. There will be no eating, drinking, chewing gum, smoking, application of makeup or lip balm, or horseplay within the laboratory or preparation and storage areas.
- 2. Lab coats must be worn during all laboratory classes.
- 3. Gloves shall be worn while handling laboratory specimens and while performing capillary and venipuncture.
- 4. Shoes worn in the laboratory must have closed toes and heels shall be no higher than two inches (2").
- 5. Hair that is longer than shoulder length shall be tied back away from the face.
- 6. There will be no mouth pipetting in laboratory classes.
- 7. Safety shields, face shields, or splash guards must be used for processing body fluid specimens.
- 8. All directions for laboratory procedures and handling of specimens and chemicals will be followed as written or verbally expressed by the instructor.

These rules are for your safety and for the safety of others in the area.

DRESS and APPEARANCE:

A PROFESSIONAL APPEARANCE MUST BE MAINTAINED AT ALL TIMES WHILE IN THE CLASSROOM AND DURING THE INTERNSHIP.

A dress code is essential for the following reasons:

- 1. Proper clothing is necessary for your safety and others who may come in contact with you.
- 2. Your appearance is important in patient care and to our profession. Individuals who have direct contact with hospitalized or ambulatory patients are viewed and judged by them as representing the healthcare team. Thus, your competence as a professional is often judged solely on the basis of your appearance. Outlandish appearance or unprofessional conduct will engender lack of confidence in the laboratory and the rest of the healthcare team.

Consequently, the basic premise of the dress code is based on standards of safety, good taste, and good grooming, all of which should result in a professional appearance and demeanor.

The full uniform consists of:

- 1. Full-length lab coat with appropriate identification.
- 2. Closed-toed shoes, clean, with heels no higher than two (2) inches.

Also:

- ➤ Hose or socks must be worn.
- ➤ Hair must be clean, neat, and tied back if longer than shoulder length. Hair should also be a natural color.
- ➤ Nails must be clean and trimmed, so as not to puncture gloves.
- Make-up should be natural and not look artificial at close range.
- Lab coats must be worn over street clothes at all times while in the laboratory.
- Lab coats are not worn outside of the laboratory, except when collecting specimens from the floor.
- ➤ Jewelry consists only of a watch, wedding band and <u>small</u> stud-type earrings only on earlobes. Note: Some facilities do not allow male students/employees to wear earrings of any kind.

Not Acceptable

- Shorts
- Caps or hats
- > T-shirts with offensive slogans
- > Floor length dresses or skirts
- > Sandals or other shoes with openings.
- > Jeans with holes
- ➤ Visible body art that depicts nudity, profanity or violence. Some facilities do not allow any tattoos to be exposed during working hours.
- ➤ Clothing that exhibits midriff, cleavage, armpits, or thighs (four or more inches above the knee).
- > Perfume or cologne

Laboratory work can be stressful and may cause heavy perspiration. Close contact with other hospital personnel is often necessary. Therefore, daily_bathing, as well as the use of an effective deodorant and/or antiperspirant is strongly recommended.

Students who do not conform to the dress code will be sent home to correct any deficiencies, and the time lost will be made up solely at the discretion and with the permission of the phlebotomy instructor/clinical educator/clinical facility.

CONDUCT

Kapi'olani Community College has a complete Student Conduct Code that applies to all students, enrolled in credit or non-credit classes. This code is available in the college catalog, available online (www.kapiolani.hawaii.edu), as well as under separate cover in the Office of the Phlebotomy Program Director and in the office of the Vice Chancellor of Student Affairs.

ACADEMIC DISHONESTY

Any student found to be dishonest in academic matters in the KCC Phlebotomy program will be dismissed from the Phlebotomy program.

Academic dishonesty includes, but is not limited to the following:

- 1. Giving or receiving assistance on a written and/or practical examination.
- 2. Having and/or using information concealed on the body, clothing, or furniture.
- 3. Copying from another's paper during exams or allowing another student to copy.
- 4. Illegitimate means of finding questions and/or answers for scheduled examinations.
- 5. Providing testing materials to others without the expressed written consent of the instructor.

Dishonesty is unfair to yourself, fellow students, and ultimately to patient care.

GRIEVANCE PROCEDURE

The College has developed procedures by which students may seek remedy if they feel they have been treated arbitrarily and capriciously in academic-related matters, including internships and clinical rotations. A concerned student may first attempt to resolve the grievance on an informal level with the faculty member, program director, and/or the clinical supervisor. Should the grievance not be resolved at this level, the student should ask the Health Sciences Department Chair to review the case. If a satisfactory solution is not reached, the student should appeal to the Dean of Health Academic Programs. If a satisfactory solution is still not reached, the student has a right to request a hearing before the Academic Grievance Committee, a body of faculty and

students. The decisions of the Academic Grievance Committee are final with the University and College. Copies of the procedures are available in the Office of the Dean of Student Affairs.

READMISSION TO THE PHLEBOTOMY PROGRAM

A student who left the Phlebotomy program during the on-campus class due to legitimate emergencies and who was making satisfactory progress in the program will be allowed to return to the program in the next session with no additional fees. If the student cannot return for the next session, he/she will be placed on the waiting list and will have to pay the entire tuition to reregister for the program.

A student dismissed from the program for academic reasons may reapply for the program and will be responsible for the entire tuition when reentering the program.

Any student who has been dismissed for academic dishonesty, unsafe behavior, professional misconduct, or illegal activity may not re-enroll in the Kapi olani Community College Phlebotomy Program.

Any student who is relieved from the 100 hour clinical practicum due to violations of the clinical affiliate policies, professional misconduct, unsafe behavior, gross negligence, etc, may not reenroll in the Kapi olani Community College Phlebotomy Program.

KAPI'OLANI COMMUNITY COLLEGE PHLEBOTOMY PROGRAM INTERNSHIP OBJECTIVES

Part II provides for the clinical application of the skills and knowledge learned in Part I. One hundred hours (100 hours) will be spent in an affiliated clinical laboratory collecting and processing specimens for the laboratory.

Upon successful completion of a minimum of 100 hours in the phlebotomy clinical practicum, the student should be able to:

- 1. Select and utilize the appropriate types of equipment to collect blood by venipuncture and capillary puncture. The student shall be able to effectively utilize:
 - 1.1 Evacuated containers
 - 1.2 Syringes
 - 1.3 Winged infusion sets
- 2. Perform a minimum of 100 successful, unaided venipunctures after choosing the appropriate equipment for each sample.
 - 2.1 Identify and utilize alternate venipuncture sites as appropriate.
 - 2.2 Collect blood for routine and special procedures.
- 3. Obtain good quality specimens from adults, infants (pediatric), children (adolescent) and elderly (geriatric) patients.
- 4. Explain and follow the rules and regulations essential for safe and accurate phlebotomy.
- 5. Process specimens accurately, according to the procedures of the clinical site.
- 6. Utilize the laboratory computer system for specimen processing as allowed by the clinical site
- 7. Exhibit appropriate interpersonal skills with patients, coworkers, and other health care personnel in person and on the telephone.
- 8. Explain the policies and use the procedures in the clinical laboratory to assure quality in the collecting of blood specimens.

- 9. Effectively transition from learning experiences in the classroom to practical application within the clinical setting, including, but not limited to:
 - 9.1 Following written and verbal instructions
 - 9.2 Asking pertinent questions
 - 9.3 Accepting guidance and constructive criticism
 - 9.4 Accepting responsibility for their own learning
 - 10. Exhibit a professional demeanor, including, but not limited to:
 - 10.1 Completing tasks in a timely fashion
 - 10.2 Following written dress code
 - 10.3 Arriving on time and staying for the required number of hours

Evaluation will be based on the completion of the 100 mandated hours, the number of venipunctures, and a score of at least 70% on the final evaluation form.

Once clinical locations are assigned, there will be no changes unless the student is unable to attend clinical training during that time due to hospitalization and/or extenuating circumstances that prohibit the student from performing as required.

If a clinical location is refused/declined, for any reason other than the aforementioned, the student will be terminated from the program.

Failure to complete at least 100 hours (not including breaks) will result in termination from the Program without the ability to repeat the clinical rotation.

PROFESSIONAL CONDUCT

Students in the program are expected to accept responsibility for their own work.

- ➤ If the assigned task(s) exceeds the student's knowledge or ability, assistance must be requested without hesitation or reluctance.
- ➤ Work must be performed thoroughly and carefully and the student must strive for continued increase in efficiency and quality.
- The standards of the Professional Code of Ethics shall be upheld.
- > Students shall assume a professional manner in both conduct and attire.
- In dealing with the instructors, program director, other members of the class, members of the laboratory staff, medical providers, and patients, the student shall conduct him/herself in a helpful, considerate, cooperative, and most importantly, professional manner.
- The rules of personal safety, as they apply to regular employees of the clinical affiliate, shall be adhered to at all times.
- The safety of other persons in the work environment shall be a continual concern.
- The dress code shall be adhered to at all times.
- Respect the Patients' Bill of Rights.
- The patient's health and therapy shall not be discussed with the patient.
- ➤ Holding information relating to patients in strict confidence (HIPAA compliance)
- Ensuring patient safety, in all respects.

ABSENTEEISM

The clinical practicum consists of a minimum of <u>100</u> hours. Any variation from the assigned dates and times must be approved by the clinical site supervisor, education coordinator, <u>and</u> the KCC Phlebotomy Program Director. The number of hours is NOT negotiable. You must complete 100 hours of clinical training before receiving the Certificate of Competence and obtaining eligibility to take the national certification examination given by ASCP.

NO CALL - NO SHOW

A violation of the 'No Call-No Show' policy may result in dismissal from the program. A violation of the No-Show policy is defined as not calling in or appearing at the clinical site at the agreed upon starting time. The clinical site may, at its discretion, dismiss astudent from the site upon the first No Call-No Show occurrence.

Punctuality is a critical part of professionalism!

GROSS PROFESSIONAL MISCONDUCT

The Kapi olani Community College Phlebotomy Program considers gross professional misconduct to include, but not be limited to, any action or activity that endangers the welfare of patients and laboratory employees. These include, but are not limited to:

- Practicing negligently
- > Practicing incompetently
- > Practicing while impaired by alcohol, drugs, or mental disability
- Willfully harassing, abusing or intimidating a patient verbally or physically
- Willfully harassing, abusing or intimidating an employee verbally or physically
- Providing a service that was not authorized

DISMISSAL

A student may be dismissed for gross professional misconduct in the clinical setting and <u>may</u> <u>not</u> reenroll/return to the Phlebotomy Program. Violations of safety and/or dress codes may also result in dismissal from the Phlebotomy Program. The appeals procedure is found with the academic policies.

INTERNSHIP POLICIES

- 1. Kapi 'olani Community College, "the College", as the accredited institution, is responsible for control of the quality of instruction.
- 2. The College will not place more than a specified number of students at any Clinical Affiliate at any given time due to supervisory limitations. The number of students must be mutually agreed upon by each Clinical Affiliate/Clinical Educator and the College in advance of student assignment.
- 3. The Clinical Affiliates may request the Director of the Phlebotomy Program of the College to withdraw from this program any participant whose performance is unsatisfactory or whose personal characteristics present undesirable relationships with the Clinical Affiliate's staff or patients, as determined by the Clinical Affiliate Director, Clinical Educator, or the Chief Technologist of the site.
- 4. The students should be in good health at the beginning of the clinical practicum. If requested, a copy of the appropriate student's recent physical exam and/or immunization record will be sent to the Clinical Affiliate before the clinical experience begins.
- 5. Personal injuries or illnesses sustained during training at a Clinical Affiliate will be treated on site upon request. Emergency medical services may be provided to the student under the same conditions as they are to other clinical affiliate employees. **However, students are responsible for any fees for emergency care.**
- 6. The facility will orient assigned students to all applicable rules and regulations with which the students are expected to comply. Special emphasis will be given to the Privacy Act of 1974, particularly regarding the patient's right to privacy and the confidentially of all records relating to patient care in accordance with the Health Insurance Portability and Accountability Act (HIPAA) of 1996.
- 7. It is recognized that all activities within the Clinical Affiliates are subject to the laws and regulations of these Affiliates. The Clinical Affiliate Director has the full responsibility and authority to assure that requirements are observed and met.

The Clinical Affiliate shall:

- 1. Provide professional laboratory supervision and guidance to the students assigned to Clinical Affiliates.
- 2. Participate with the faculty members of the Phlebotomy Program of the College in the development of clinical training at clinical sites.
- 3. Provide the participants with access to the agreed upon laboratory departments of Clinical Affiliates, at the discretion of the clinical laboratory supervisor and with proper supervision.
- 4. Retain ultimate control of the operating policy and administration of the Agreement and be responsible for the professional medical support and administrative services related to patient care and other ongoing programs within the Affiliate. The standards and level of patient care within the Clinical Affiliates are implicit in the responsibility.
- 5. Appoint specific clinical coordinator to be the clinical liaison with the College faculty.

SERVICE WORK

Students may perform service work during their clinical rotation if it is part of the learning experience. Repeated performance of duties in the clinical affiliate at the expense of other educational experiences is considered exploitation of students, and will not be allowed. Students may be hired by a clinical facility prior to completing the clinical rotation; and the hours spent performing paid phlebotomy duties will be considered part of the clinical experience. Students will responsible for ensuring that the supervisor completes the clinical evaluation and that the time sheet reflects at least 100 hours and 100 unaided successful venipunctures.

The Clinical Instructor(s) assigned to train students shall:

- 1. Orient students to hospital, laboratory, and departmental policies and procedures.
- 2. Acquaint student with the location of procedure manuals, equipment, reagents, reference materials, and other resources. Allow student access to those resources.
- 3. Instruct student using any technique effective in improving clinical performance. Some of these methods include:
 - a. Demonstrate of technique
 - b. Utilization of audio-visual aids
 - c. Supervision of student practice
 - d. Guidance and providing feedback on quality of performance during rotation
- 4. Provide students with opportunities to observe, assist with, and perform as many procedures as possible.
- 5. Confer with KCC faculty about students and program.
- 6. Evaluate student performance by completing or verifying the following KCC clinical forms:
 - a. Time sheets
 - b. Final Evaluation
- 7. Give written, oral, practical exams as agreed upon.
- 8. Immediately inform KCC faculty about unsafe behavior demonstrated by student while on site.
- 9. Suggest revisions to clinical evaluation forms and technical training.

The Kapi'olani Community College Phlebotomy Program shall:

- 1. Provide students who are academically qualified and who are in compliance with the Code of Student Conduct, as stated in the College Student Handbook (found online at www.kcc.hawaii.edu), to participate in clinical experience.
- 2. Provide advice on program direction and consultations with clinical faculty members for program development.
- 3. Notify the Clinical Coordinator of the Affiliate with regard to changes in the scheduling of assigned students so that suitable adjustments can be made.
- 4. Ensure students are covered by malpractice insurance.
- 5. Maintain regular communication with the Affiliate during student placement, and visit each student as needed during the internship. (Students assigned to neighbor island sites will be visited one time during the clinical rotation. Phone contact shall occur on a regular basis.)
- 6. Review Evaluations and determine grade for the clinical rotation. Provide grade to the student and archive as per College policy.
- 7. Remove from the site any student who exhibits unsafe behavior until it can be determined by the appropriate grievance procedure that the student may safely return to the site.

The KCC Phlebotomy student shall:

- 1. Prior to entry to a Clinical Affiliate, read the appropriate pages in the Phlebotomy Program Student Handbook. Review all forms.
- 2. Complete medical requirements.
- 3. Pay for liability insurance.
- 4. Arrange for and meet expenses for travel to and from clinical site.
- 5. Report to clinical site on time. Call Affiliate ahead if tardiness or absence is anticipated. Inform KCC faculty of absence prior to scheduled shift. Arrange with clinical instructor to make up any time missed.
- 6. Complete time sheet on a daily basis.
- 7. Take initiative to see and do as many techniques and procedures as possible. Strive for working knowledge and proficiency.
- 8. Request clinical instructor to complete evaluation form at the end of the clinical rotation.
- 9. Discuss with KCC faculty any problems or situations that require clarification or information on a timely basis.

CLINICAL SITES

The Phlebotomy Program tuition includes placement in an affiliated clinical facility for <u>at least 100</u> <u>hours</u> of phlebotomy experience upon successful completion of Part I. In the unlikely event that sufficient clinical sites are unavailable immediately following Part I, then students will be placed in a site as soon as the next opening becomes available. Students will be placed in priority order based on Mid-Term Examination scores, with students receiving the highest scores having first priority. All qualified students will be placed in a clinical facility two months of completing Part I unless unforeseen circumstances arise.

The College is responsible for the clinical site placement arrangements. A student who attempts to negotiate his or her own placement may be subjected to dismissal from the program unless prior approval was granted by the Program Director. While every effort will be made to accommodate student requests for particular sites, the Phlebotomy Program does not guarantee placement in any specific site.

PHLEBOTOMY PROGRAM PERFOMANCE EVALUATION

<u>Directions:</u> This form is to be filled out by the Phlebotomy site supervisor or clinical trainer upon the completion of the 100 hours of internship. Place a check before each statement that best reflects the overall performance of the student. This evaluation becomes a part of the student's permanent record in the Phlebotomy Program.

Name of Student:
Clinical Training Site:
Period of Evaluation: From:to
Phlebotomy Supervisor's Signature:
A. PHLEBOTOMY SKILLS (40 points)
After completion of 100 hours of phlebotomy practice, the student was able to
1. Select the appropriate equipment and supplies for obtaining a blood sample
 consistently, referring to the Standard Operating Procedures (SOP) when in doubt with some errors, occasionally neglecting to refer to SOP without referring to SOP when in doubt
2. Obtain quality specimens from adults, infants, children, and elderly patients.
consistently (<10% redraw rate) with a 15 - 20% redraw rate with >20% redraw rate
3. Properly follow the laboratory quality control and safety procedures
consistently with occasional errors rarely
4. Process specimens accurately, following the SOP
consistently with occasional errors rarely

COMMENTS on PHLEBOTOMY SKILLS:

B. <u>KNOWLEDGE</u> (20 points)
The student demonstrated knowledge of the theory and basic principles of phlebotomy that is
above average average below average (unsatisfactory)
COMMENTS on KNOWLEDGE:
C. <u>LEARNING SKILLS</u> (10 points)
Student was an active learner; asked pertinent questions when necessary accepted guidance and constructive criticism Student performed tasks as directed, but did not actively pursue learning Student appeared to be bored and was unwilling to do more than the minimum amount of work Student was arrogant and overconfident and did not accept guidance and/or constructive criticism.
COMMENTS on LEARNING SKILLS:
D. <u>PROFESSIONAL CHARACTERISTICS</u> (30 points)1. Ability to relate to others
Student related to instructors, patients, and other personnel in a cooperative and courteous manner Student occasional had interpersonal conflicts Student had difficulty getting along with most people.
2. Punctuality
Always on time Usually punctual Frequently late

3. Organization	of Work
fashion.	Student always completes collections of a series of specimens in a timely Student usually completes collection of a series of specimens in a timely but needs improvement in organizational skills. Student is unable to complete a series of collections in a timely fashion, breect protocol.
4. Initiative	
responsi	Student is a "self-starter" who is always willing to take on greater ibility. Student accepts additional responsibilities willingly when asked to do Students shirks responsibility.
5. Persistence	
	Student can be depended upon to follow through on all procedures. Student has a tendency to give up when things do not go right. Student frequently fails to finish a procedure.
6. Appearance	
	Student always appears professional and well groomed. Student occasionally appears unprofessional in dress and/or grooming. Student exhibits an unprofessional appearance most of the time.
COMMENTS on PROF	ESSIONAL CHARACTERISTICS:
E. <u>ADDITIONAL COM</u> examples of student's str	IMENTS: Use this space below to make further comments and/or to cite specific rengths and weaknesses.
